User Research

Responsive & Native Design

SUMMARY

Product Designer with 4+ years taking complex, operationally critical products from problem to shipped solution — owning research, UX, visual design, and design systems across web and native. I build design systems from scratch and use behavioral data to remove friction in high-volume workflows. A filmmaking background sharpens my eye for detail and storytelling.

EXPERIENCE

UrbanPiper

Apr 2022 – Present

Restaurant-tech SaaS platform for online ordering, POS, and delivery-channel integrations — powering 40,000+ locations across 30+ countries (Subway, Biryani Blues, and more).

Product Designer

Oct 2024 – Present

Promoted to lead complex, high-ownership systems and flows across Atlas, Hub, and Prime — after owning design solo across all squads for ~4 months through the transition into the role.

Menu Rules — Menu Exception System (Atlas / Hub)

- Designed **Menu Rules** (**58–78 weekly active users**): targeted menu exceptions by platform, location, and item on one source-of-truth menu — replacing dozens of cloned menus for brands like Domino's.
- Built a When/For/Then rule builder with live preview, conflict resolution (surfaced in user testing), and brand-level-platform guardrails.

Request to Go Live — Self-Serve Activation (Hub)

- Cut merchant onboarding from **~6–8 days to ~4 days** with a self-serve activation flow that removed a 4–6 day onboarding-team bottleneck.
- Mapped **1,700+ locations live in 3 months** without manual team involvement, cutting go-live support tickets **~13%**.

Prime — Point of Sale

- Eliminated a false "success" state on async stock actions with real-time alerts — **~46% of users** now catch failures before they cause cancellations or platform penalties.
- Retained **2 enterprise brands (30+ outlets each)** with add-on quantity controls (e.g., 6- and 12-count donut boxes), replacing exhaustive modifier groups.

Atlas — Admin Analytics

- Designed the Analytics comparison feature, letting HQ admins compare performance across locations, platforms, and items.

Associate Product Designer

Apr 2022 – Oct 2024

Executed end-to-end design across Meraki, Prime, and Atlas — growing from the team's first designer into owning work across all squads.

Meraki — White-Label Ordering (Web & Native App)

- Grew **Luna** to Meraki's majority storefront theme (**~65% adoption**) — shipped solo with one dev and one PM, including the product's first design system.
- Designed **Tesla**, the white-labeled native app now serving **~25K monthly active users** across Biryani Blues, Subway (Mexico & Colombia), and Gen Korean BBQ House.

Prime — Point of Sale

- Overhauled Order Tracker, KDS, and billing across mobile, tablet, and web — cutting visual clutter while preserving working flows.
- Shipped BOGO discounts for dine-in POS (a net-new capability), now with **~20 promos created**.

Atlas — Admin Analytics

- Drove **Scheduled Reports** adoption to **148 businesses** and **451 schedules** (**27% view-to-schedule conversion**) via an end-to-end Reports revamp.

Throughout: built design systems for Meraki, Prime, and Atlas/Hub; drove decisions with Hotjar & PostHog behavioral data; validated directly with PMs, engineering, founders, and merchants.
